

# Update Project Screens Over Internet or Email

## NO Programming Software or Knowledge of HMI Programming Required

### Where OEM Packager makes sense

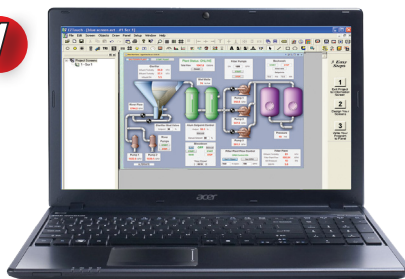

EZ OEM Packager is a unique utility which allows OEMs and System Integrators to Email the Enduser's HMI program over the internet. The Enduser will not need to have the EZPanelEdit Programming Software. It also protects the OEM/SI from having the Enduser have access to the development HMI program.

EZTouch® HMI

OEM/SIs are typically forced to snail-mail Touchpanel Upgrades/Updates using Compact Flash cards or USB Drives (assuming end user does not have a copy of HMI programming software). Sending compact flash cards through regular mail is a time consuming process and can take several days before the end user receives update. For International customers this could mean delay of weeks if not more!

OEM/SI Utility (EZPackager) creates updates in the form of Zip files from the programming software. This update (zip file) can be e-mailed to the end user within minutes. The end user simply extracts the zip file and runs the updating utility (EZPanelUpdater.exe) to complete the update. HMI programming software is not required by the end user for this update.
